### INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

	<u> </u>	
Internation	olication No.	
`.	., v*	
PCT/US04/3	1886	

Box No. I Basis of the report				
With regard to the language, this report is based on:				
the international application in the language in which it was filed.				
a translation of the international application into <u>English</u> , which is the language of a translation furnished for the purposes of:				
international search (under Rules 12.3 and 23.1(b))				
publication of the international application (under Rule 12.4(a))				
international preliminary examination (under Rules 55.2(a) and/or 55.3(a))				
2. With regard to the elements of the international application, this report is based on (replacement sheets which have been furnished to the receiving Office in response to an invitation under Article 14 are referred to in this report as "originally filed" and are not annexed to this report):				
the international application as originally filed/furnished				
the description:  pages 1-12 as originally filed/furnished  pages* NONE received by this Authority on pages* NONE received by this Authority on pages*				
the claims:  pages NONE pages* NONE pages* 14 and 15 the claims:  pages NONE as originally filed/furnished pages* as amended (together with any statement) under Article 19 pages* 14 and 15 received by this Authority on 04 August 2005 (04.08.2005)				
pages* NONE received by this Authority on				
the drawings:  pages 1-5 as originally filed/furnished  pages* NONE received by this Authority on pages* NONE received by this Authority on pages*				
a sequence listing and/or any related table(s) - see Supplemental Box Relating to Sequence Listing.				
3. The amendments have resulted in the cancellation of:				
the description, pages				
the claims, Nos				
the drawings, sheets/figs				
the sequence listing (specify):				
any table(s) related to the sequence listing (specify):				
4. This report has been established as if (some of) the amendments annexed to this report and listed below had not been made, since they have been considered to go beyond the disclosure as filed, as indicated in the Supplemental Box (Rule 70.2(c)).				
the description, pages				
the claims, Nos				
the drawings, sheets/figs				
the sequence listing (specify):				
any table(s) related to the sequence listing (specify):				
* If item 4 applies, some or all of those sheets may be marked "superseded."				

Form PCT/IPEA/409 (Box No. I) (April 2005)

#### INTERNATIONAL PRELIMINARY REPORT ON PATENTABILITY

International application No. PCT/US04/31886

]	Box No. V	Reasoned statement under Article applicability; citations and explan		ard to novelty, inventive step or industrial ing such statement	
1	1. Statement				
	No	ovelty (N)	Claims 8,10,	,11	_YES
			Claims <u>1-7,9</u>	)	_NO
	In	ventive Step (IS)	Claims NON	VE	_YES
			Claims 1-11		_NO
	· In	dustrial Applicability (IA)	Claims 1-11		_YES
			Claims NON	VE	_NO
_					

2. Citations and Explanations (Rule 70.7)

Claims 1-7,9 lack novelty under PCT Article 33(2) as being anticipated by Giantureo et al. 706. Giantureo discloses (Fig. 6) a stent with interconnected annular segments and have the support frame partly surrounded by a thread 40 that is interwoven in the eyes. Fig. 4 shows the stent is tubular and that deflection elements 20 are arranged on the circumference of the frame and on the end-side. Fig. 5 also shows the deflection has deflection elements 20' arranged on the inner side of the stent facing the middle and the adjacent annular segment 10" has a deflection element 20". Fig. 10B shows thread ends 56 coupled by connector 70 since they extend together in the tube. With respect to claim 9, it can be construed that additional guide elements are provided in the frame, see Fig. 3.

Claim 8 lacks an inventive step under PCT Article 33(3) as being obvious over Giantureo et al. Giantureo is explained above. Giantureo fails to disclose the connector tube is of a material that is x-ray visible. It is well known in the art to use radiopaque markers in delivery tubes. It would have been obvious to incorporate a marker in the connector tube of Giantureo to permit the surgeon to better see the end of the device as they remove the stent.

Claims 10,11 lack an inventive step under PCT Article 33(3) as being obvious over the prior art as applied in the preceding paragraph regarding Giantureo and further in view of Cox. Giantureo fail to disclose the annular segments are formed by struts in an endless corrugated manner, coupled with connector struts or a longitudinal section or spine running along the longitudinal axis. Cox shows (Figs. 2,9) a spine or longitudinal section along the axis. Cox teaches that the continuous spine prevents the stent from shortening longitudinally and helps prevent the stent from storing energy as the sheath is retracted It can also be seen the strut section has a U-shape and is transverse with the spine since

they extend across the spine. It would have been obvious to one of ordinary skill in the art to use a spine to join the annular segments as taught by Cox in the stent of Giantureo such that it prevents foreshortening of the stent upon implantation.

Applicant's remarks have been considered		ith respect to the Giantureo refer	ence.
NEW CITATION	5		

### IAP20 Rec'd PCT/PTO 30 MAR 2006

#### **CLAIMS:**

- 1. A stent with a tubular support frame (2) consisting of axially successively following, interconnected annular segments (3, 4, 5), wherein said support frame (2) is surrounded on its outside by a thread (11), characterized in that the thread ends (12, 13) are guided via a deflection (14) from the outside into the support frame (2), where they are coupled by a connector (17).
- 2. The stent according to Claim 1, characterized in that the deflection (14) is realized at least one deflection element (15, 16; 19, 20; 22, 23; 26, 27) provided on an annular segment (3, 4).
- 3. The stent according to Claim 1 or 2, characterized in that the deflection (14) is formed by two deflection elements (15, 16; 19, 20; 22, 23; 26, 27) arranged on the circumference of the support frame (2) with an interval (A) from one another.
- 4. The stent according to Claims 1 or 2, characterized in that the deflection (14) is provided on an end-side annular segment (3), viewed in the direction of the longitudinal axis (L) of the stent.
- 5. The stent according to Claims 1 or 2, characterized in that the deflection (14) is arranged on an inner side, facing the middle of the stent, of the annular segment (3).
- 6. The stent according to Claims 1 or 2, characterized in that the deflection (14) is formed by two deflection elements (19, 20; 22, 23) of which a first deflection element (19; 22) is arranged on an inner side, facing the middle of the stent, of an annular segment (3) and that the second deflection element (20; 23) is arranged on an outer side of the annular segment (3).

- 7. The stent according to Claim 3, characterized in that the deflection (14) is formed by two deflection elements (26, 27) of which a first deflection element (26) is provided on the end-side annular segment (3), viewed in the direction of the longitudinal axis (L) of the stent, and a second deflection element (27) is provided on the adjacent annular segment (4).
- 8. The stent according to one of the Claims 1 or 2, characterized in that the connector (17) consists of a material visible in x-rays.
- 9. The stent according to one of Claims 1 or 2, characterized in that guide elements (28) are provided in the support frame (2).
- 10. The stent according to one of Claims 1 or 2, characterized in that the annular segments (3, 4, 5) are formed by struts (6, 7) that follow one another in an endless, corrugated manner and that adjacent annular segments (3, 4, 9) are coupled by connector struts (8, 8').
- 11. The stent according to Claim 10, characterized in that each connector strut (8, 8') comprises a longitudinal section (9) running substantially parallel to the longitudinal axis (L) of the stent and comprises a strut section (10) aligned transversely to the latter and configured in a U shape or V shape.
